

Coding app Freggers Play now available for Android tablets

Regensburg, 26/10/2017 - With Freggers Play for Android tablets

(<https://www.freggersplay.com>) SPiN AG enables even more children and those who have stayed a child at heart to learn coding easily.

Raising curiosity for IT & Co.

Originally developed for iPads SPiN has closed a circle with releasing the version for Android tablets. „It is important to us to be present on as many devices as possible with Freggers Play in order to reach our goal of preparing today's kids with skills for tomorrow.“ says CEO Fabian Rott. He proceeds: „We want to enthuse kids for coding - especially girls; studies show that during primary school girls' and boys' interest in STEM is about the same. Only after entering highschool do girls gradually lose interest; reason for this dwindling interest, however, is not a lack of skill. Performance in experiments does not get poorer before they are not made to feel STEM was rather for boys. We want to change that.“ This intention has also convinced FilmFernsehFonds Bayern and Creative Europe MEDIA who have funded the project.

Creating worlds with physics engine and particle effects

Freggers Play offers cute high-resolution 3D art and the complex technology of a professional game engine (Unity) wrapped in simplicity, enabling little future developers to tell stories or create their own movies and games - without lessons, without scoring, 100% free play and room for own ideas. By now over 20,000 projects have been created.

Versatile possibilities in school sector

To demonstrate the attractiveness of STEM teachers e.g. can utilise the app for brightening up class or by launching an official joint project that can be gradually pursued. The students can „work“ unhurriedly at home using their own tablets playing around with their ideas and later share their results in class - maybe even merge them to the joint project. And parents are assured their kids do something reasonable as well as fun and maybe even join their youngsters for coding something together.

Behind the scenes and prospects

Freggers Play is available in the iOS app store for iPads and in the Google Play store. 3 backdrops and 42 objects are included for free. Additional sets with 21 objects are available for 1,99 Euros. To express appreciation and thereby giving additional incentives for the creative community, possibilities for social feedback are being developed.

About SPiN AG

SPiN AG, located in Regensburg, Germany - having emerged from the „primeval soup“ of the Internet, more precisely from a text based multiuser dungeon - has been developing and operating web applications for corporate groups, online communities for everybody and games for (our) kids.
